

Green Skilling & Sustainability

NAME: DIVYA INANI RAMKISHORE

ENROLLMENT: 230760107043

STREAM: COMPUTER ENGINEERING

**COLLEGE: SHREE SWAMI ATMANAND SARASWATI
INSTITUTE OF TECHNOLOGY (SSASIT)**

What I Learned

- **What is SDG 17 – Partnerships for the Goals?**
- **Sustainable Development Goal (SDG) 17** focuses on strengthening global partnerships to achieve all 17 Sustainable Development Goals. It encourages countries, organizations, businesses, and individuals to work together to solve global challenges such as climate change, poverty, inequality, and environmental degradation.
- **What is Green Skilling?**
- Green Skilling refers to developing the knowledge and practical skills needed to protect the environment and promote sustainable development. It prepares people for jobs that contribute to a greener economy.

Sustainability & AI

- Sustainability means using natural, economic, and social resources responsibly so that current needs are met without compromising the ability of future generations to meet theirs.
- **AI for Sustainability**
 - **Good Aspects**
 - Helps monitor forests, wildlife, and pollution.
 - Assists in climate prediction and disaster management.
 - **Bad Aspects**
 - Requires large amounts of electricity for training and running AI models.
 - Data centres consume significant amounts of water for cooling.

Should I shift to electric vehicle?

Vehicle Segment	Select	Comparing Vehicle Fuel Type	Select
Journey Distance	km	Journey Frequency	Select
Annual Journey Distance	km	CO2 emissions factor	g/km
Comparable EV Battery Capacity	kWh	EV Range	km
Battery needed for total journey	kWh	Electricity CO2 emissions factor	g/kWh
Lifecycle of the Vehicle	years		

[Calculate](#)

PROTECT + RESTORE OUR PLANET

YOUR CARBON IMPACT IS 74.35 METRIC TONS CO₂

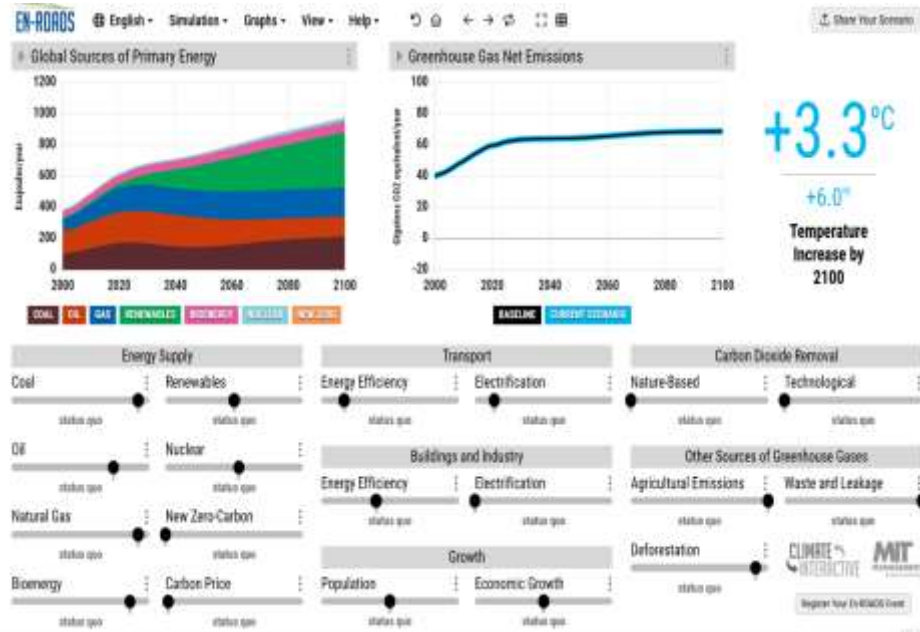

Protecting 27.04 hectares of tropical forest can neutralise that amount of carbon dioxide.

On average, a hectare of tropical forest stores carbon equating to 550 metric tons of CO₂. With annual tropical deforestation rates averaging 0.5%, this results in 2.75 metric tons of CO₂ emitted per hectare each year.

Nature is the most powerful technology to fight climate change. Yet we are losing vital ecosystems at alarming rates.

To prevent complete climate breakdown, we must halt the degradation and deforestation of habitats and restore nature. The planet is at a tipping point, and we need your help.

When you neutralize your footprint, you will protect forests around the world — a critical step in our fight against climate change.

AI Garbage Detection from Images

- A user uploads a photo of a street, park, or beach.
- The AI:
 - Detects garbage.
 - Highlights littered areas.
 - Estimates how much waste is present.
 - Generates a cleanliness score.
